Today

Hello, there is the following situation:
 There is a class annotated `@FeignClient` It is located in its own project

```
package test;
```

@spencergibb : How to disable zuul filters ?

Spencer Gibb @spencergibb 12:14
`zuul.<ClassSimpleName>.<filterType>.disable=true`

pradeepkusingh @pradeepkusingh 12:14
 Thanks 😊

Spring Boot cannot find the AST transformations via ServiceLoader #30

[Edit](#)[New issue](#)

Spring Cloud member

I think this is a Spring Boot issue but it's blocking us here, so we can keep this open till it gets fixed. The new layout for the classpath in Spring Boot 1.4 seems to make the `ServiceLoader` miss the entries for AST transformations (although it found the commands which is odd?). Symptoms are integration tests that work, but when you `spring install` the Cloud CLI extension you can't use any of the compiler ASTs it provides (like `@EnableConfigServer`):

```
$ spring run spring-cloud-cli-integration-tests/samples/configserver.groovy
startup failed:
file:/home/dsyer/dev/cloud/scripts/cli/spring-cloud-cli-integration-tests/samples/configserver.groovy
 @ line 3, column 1.
   @EnableConfigServer
   ^
1 error
```
